

## UNIQUE CENTRAL MODEL FOR MATERIAL MANAGEMENT

### 17000 DATA SETS CENTRALIZED

#### CHALLENGES

- // Identification of duplicates within the standalone system and the central SAP master; Data available in site material master was disorganized and not sizeable
- // Adherence to project timelines as it involved Migration and transition impacting the end user

#### SOLUTION HIGHLIGHTS

- // All materials standardized, cleansed, enriched and classified to a reference system
- // 16878 decentralized data sets converted and migrated to central material type
- // Central materials were classified to a reference system with more characteristics (than the Decentralized counterparts)
- // Data enrichment to achieve the required level of quality

#### BUSINESS VALUE DELIVERED

- // 10% of Potential identified from both decentralized and Central Material Master
- // Awarded New Material Creation Request support for all global Plants end users
